QSL sent/received Date not honoring UTC setting

- Confirm Delete QSOs should display number of QSOs to be deleted

DX Cluster

sh/mydx – Added feature for DX Spider connections that makes use of server-side filters. This enables the user to eliminate spots from the initial cluster connection. This is user selectable between sh/mydx or sh/dx, however there is no difference in the behavior of sh/mydx if there are no server-side filters. This enhancement is found under DX cluster options.

Functional

Changed the toolbar Logbook dropdown 'selections' title to 'Edit selections'.

Set mode (in addition to frequency) when selecting a spot. This feature will be improved in future versions to include user-defined band plans. In this release, RTTY changes mode to USB (because DM780 doesn't currently support FSK).

Fixed a bug where the CQ zone was taken from the countries file and not from QRZ.

Added vertical scrollbars to My Station and other tabs; when the size of the ALE window is smaller than that capable of displaying the entire array of fields comprising the My Station Tab, a vertical scroll bar is available at the right vertical edge of the tabbed portion of the dialog.

QRZ subscribe button added

All date/time controls now support UTC

Short path and long path headings and distances shown in ALE

HRD Radio Support

Support for Icom IC-7600 Enhancement Completed 5.1

Support for Icom IC-7410 Enhancement Completed 5.1

DM780 - ALE Window

When 'First name' is selected only the first name is being displayed in the QSO which is correct but the entry to the logbook should be 'Full name' not just the first name as it is now.

DM780 Soundcards Sync with ROC
